Scinax ruber (Red-snouted Treefrog). Distribution.

Date of observation: 27 May 2011. Location: Puerto Rico: Cabo Rojo; Boquerón. Coordinates: 18.032011, -67.173192. Elevation: 2 m. Voucher: image. After heavy rains (more than 10 inches) a small pond formed. There were five males calling and one female was seen. Land usage is for cattle pasture, with scattered trees. This is a range extension for this introduced, invasive, species to the southwestern corner of the island. Identification verified by Jose A. Colon.
